“Geographies of Racial Mixing in Households and Neighborhoods”

Thursday March 12\textsuperscript{th}, 2015 from 3:30 – 4:45 p.m.
Donald L. Houston Building\textsuperscript{*} Room 103
– Light Refreshments provided –

Mark Ellis
Professor of Geography
University of Washington
Director, Center for Studies in Demography and Ecology
Executive Director, Northwest Census Research Data Center

Mark Ellis is Professor of Geography (PhD, Indiana 1988) at the University of Washington where he also serves as Executive Director of the Northwest Census Research Data Center and Director of the Center for Studies in Demography and Ecology. His research and teaching interests focus on: immigration; race, ethnicity, and the American city; economic restructuring and local labor markets, geography of the global economy, theorizing the city, and research methods. His presentation will review findings from a research program investigating the distribution of mixed-race households in urban space and its connections with neighborhood context and residential segregation. The research, which was funded by Russell Sage Foundation and the National Science Foundation, draws on restricted census data to establish neighborhood geographies of mixed-race households in US metropolitan areas. Information about the project with links to interactive maps and associated GIS data can be found at the “Mixed Metro US: Mapping Diversity and Segregation in the USA” website at (project website). Related publications with co-authors Steven Holloway and Richard Wright can be found at (related publications).

Click for Location/Directions (or visit txcrdc.tamu.edu) Onsite parking is free.
